Abstract—**This instruction sheet provides you with the guidelines for preparing the two-page short paper for the 19th International Conference on Computation of Electromagnetic Fields (Compumag 2013), which will be held on 30 June – 4 July 2013 in Budapest, Hungary. The general layout for the short paper is basically the standard template of the *IEEE Transactions on Magnetics*, except that the short papers are limited to two pages. Accepted short papers will be included in the book of conference proceedings. Papers presented at the conference will be considered for publication in the *IEEE Transactions on Magnetics* after a second peer-review process. Please carefully follow the instructions contained in this document in order to ensure legibility and uniformity of short papers in the conference records. To qualify for the conference, the Abstract must clearly state the novelty of the work regarding the numerical computation of electromagnetic fields.**

Index Terms—**Must be chosen from the list of the IEEE keywords.**

I. Introduction

Please use this document as an instruction set for the preparation of the two-page short paper. You can also download the electronic versions from the website of the conference, *http://www.compumag2013.com*, which can serve as template for LaTeX, OpenOffice.org (LibreOffice) Writer and Microsoft Word, respectively.

II. General Layout of the Two-Page Short Paper

Please prepare the camera–ready copy on regular size paper (8.5 in x 11 in = 21.6 cm x 27.9 cm) or A4 paper (21.0 cm x 29.7 cm). The short paper should be prepared in double-column format. The total text height should be 9.6 in (24.4 cm). The total width should be 7.2 in (18.3 cm) with a separation of 0.2 in (0.5 cm) between the columns. Please provide a top margin of 0.7 in (1.8 cm) and a left margin of 0.65 in (1.65 cm). Paragraphs follow the indented paragraph format with left and right justification. Use 0.2 in (0.5 cm) for paragraph indentation. Don't leave space between the paragraphs.

Please number section headings with Roman numerals and center them in the column. The spacing before and after the section headings should be 12 pt and 4 pt, respectively. Please number the subheadings with alphabetical letters. The spacing before and after the subheadings is 6 pt and 3 pt, respectively. The indentation for subheadings is 0.1 in (0.25 cm).

III. Type and Size of Fonts

Please use Times New Roman typeface and follow the type size specified in Table I as closely as possible.

TABLE I
TYPES SIZES FOR CAMERA-READY PAPERS

Item	Type Size (points)	Appearance
Title	24	Regular
Author's Name	12	Regular
Author's Affiliations, mailing address, and E-mail	10	Regular
Abstract	9	Bold
Section Titles	10	Small capitals, centered in column, Roman numerals
Subheadings	10	Italics, alphabetical numerals
Main Text	10	Regular
Subscripts and Superscripts in the Main Text	8	Regular
Equations	10	Regular
Figure Captions	8	Regular, centered in column, Arabic numerals
Table Captions	10	Small capitals, title case, centered in column, Roman numerals
Table Name/Description	8	Small capitals, title case, centered in column, Roman numerals
Table Text	8	Regular
Subscripts and Superscripts in Table Text	6	Regular
References	8	Regular

IV. Useful Hints

A. Abbreviations and Acronyms

Define abbreviations and acronyms the first time they are used, even after they have been defined in the abstract. Commonly acceptable abbreviations such as IEEE, SI, MKS, ac, and dc do not have to be defined. Do not use abbreviations in the title unless they are unavoidable.

B. Figures and tables

Place figures and tables in the middle of columns. Figure captions should be centered below the figures; table captions should be centered above the tables. Please use words rather than symbols to label the axes. As an example, write the quantity "Magnetization," or "Magnetization, M," not just "M." Put units in parentheses. Do not label axes only with units. As in Fig. 1, for example, write "Magnetization (A/m)"

or "Magnetization $(A \cdot m^{-1})$," not just "A/m." Do not label axes with a ratio of quantities and units. For example, write "Temperature (K)," not "Temperature/K." Multipliers can be confusing. Write "Magnetization (kA/m)" or "Magnetization $(10^3 A/m)$," not "Magnetization $(A/m \times 1000)$" because the readers would not know whether the top axis label in Fig. 1 meant 16000 A/m or 0.016 A/m.

Figure labels should be legible, approximately 8 to 12 point type when reduced to column width. Note that "Fig." is abbreviated. There is a period after the figure number, followed by two spaces.

Fig. 1. Magnetization as a function of applied field

C. Equations

Number equations consecutively with equation numbers in parentheses flush with the right margin, as in (1). To make your equation more compact, you may use the solidus (/), the exp function, or appropriate exponents. Use parentheses to avoid ambiguities in denominators. Punctuate equations when they are part of a sentence, as in

$$B_x = \frac{\partial A}{\partial y} = \frac{1}{2\Delta_e}(r_1 A_1 + r_2 A_2 + r_3 A_3) \ . \tag{1}$$

Be sure that the symbols in your equation have been defined before the equation appears or immediately following. Refer to "(1)," not "Eq. (1)" or "equation (1)" except at the beginning of a sentence: "Equation (1) is…". Please confine equations to one column width and break equations at appropriate algebraic symbols.

D. Units

Use either SI (MKS) or CGS as primary units. SI units are strongly recommended. Avoid combining SI and CGS units, such as current in Ampere and magnetic field in Oersted. If you must use mixed units, clearly state the units for each quantity in an equation.

E. Conclusion

A conclusion section is not required. Although a conclusion may review the main points of the paper, do not replicate the abstract in the conclusion. A conclusion might elaborate on the importance of the work or suggest applications and extensions.

F. References

Number citations consecutively in square brackets [1]. The sentence punctuation follows the brackets [2]. Multiple references [2], [3] are each numbered with separate brackets [2]-[3]. When citing a section in a book, please give the relevant page numbers [2]. In sentences, refer simply to the reference number, as in [3]. Do not use "Ref. [3]" or "reference [3]" except at the beginning of a sentence. Papers that have not been published should be cited as "unpublished" [4]. Papers that have been submitted for publication should be cited as "submitted for publication" [5]. Papers that have been accepted for publication but not yet specified for an issue should be cited as "to be published" [6]. Please give affiliations and address for private communications [7]. Use a space after authors' initials. Capitalize only the first word in a paper title, except for proper nouns and element symbols.

Adequacy of references is one of many factors to be considered by COMPUMAG paper reviewers. It is strongly suggested that the full paper should contain 10–15 references, and the short paper half of that number, with significant proportion of those having appeared in recent years in IEEE Transactions on Magnetics, and that self-citations should be limited as much as reasonable.

G. Language

The use of grammar and spelling checker is strongly recommended. It is also suggested that you have the short paper proofread by a native English-speaking colleague if your native language is not English.
